

FOR IMMEDIATE RELEASE

## Second US HoloTouch Patent Deepens and Expands its IP Portfolio

Darien, Connecticut, June 5, 2006 – R. Douglas McPheters, President of [HoloTouch, Inc. \(www.holotouch.com\)](http://www.holotouch.com), announced today that the [U.S. Patent and Trademark Office \(www.uspto.gov\)](http://www.uspto.gov) recently issued [US Patent 7,054,045](#), arising out of the discoveries of McPheters, John Breitenbach and John F.W. Perry. Patent 7,054,045 (its cover page is shown at the right) has been assigned by the inventors to HoloTouch, Inc. HoloTouch® technology is already the subject of US Patent 6,377,238, UK Patent No. 2292711 and Canadian Patent 2,160,245, with additional patent applications pending in the European Union and other major industrialized countries worldwide.

Reached at his Darien office, McPheters explained: "US Patent 7,054,045 greatly enhances our intellectual property portfolio by protecting our ability to provide increasingly compact touchless, holographic human-machine interfaces ("HMIs"), to provide touchless, holographic HMIs that have the functional equivalent of touch screens, to offer interactive "heads up" HMIs in automotive, aviation and other cockpits and laying the foundation for virtual holographic HMIs which are larger than the electronics they control"

McPheters also noted that the company's generic evaluation kit, BeamOne, available with USB and serial port as well as relay output, has been purchased by a number of leading OEMs, in order to familiarize their engineers, marketing personnel and potential customers with the flexibility of HoloTouch and the relative ease of integrating it into their products.
